

EJITE Featured Student Reviewer 2006

Pete Molino, M.Ed.
Doctoral Student
Idaho State University
Pocatello, Idaho

Email: pete@accesspointkids.com

Research Interests:

My primary experimental research interests are in the area of functional analysis of problem behavior, choice analysis, and choice interventions using functional communication training. Other research activities involve a position paper examining the misuse of professional terms in published research within the field of Applied Behavior Analysis.

While working as a reviewer for EJITE, what have you learned about yourself as a researcher?

Being a reviewer for EJITE has provided me an excellent opportunity to contribute to, and benefit from, the process of scientific inquiry. With a strong background in single subject research designs, I've enjoyed venturing into the world of between group designs. As a reviewer, I've learned to focus my attention on experimental designs and the tenets of good scientific research. With that approach, a reviewer can confidently critique and evaluate research that may be outside his or her scope of expertise, yet still contribute to the scientific peer review process. I've found this to be an excellent method in developing and strengthening my research skills.

Recent Review Activities

Guest student reviewer for Education and Treatment of Children Journal

Guest student reviewer for Electronic Journal for the Integration of Technology in Education
